

# POLARIS

## GLOBAL VALUE FUND

**Total Net Assets** \$421 Million  
**Nasdaq Symbol** PGVFX  
**CUSIP** 349903484  
**Inception Date** 7/31/89  
**Expense Ratio (Gross)** 1.22%  
**Expense Ratio (Net)** 0.99%

The Fund's annual operating expense ratio has been reduced to 0.99% through April 30, 2025 due to the Adviser's contractual agreement to waive its fee and/or reimburse expenses to limit Total Annual Fund Operating Expenses.

### Risk Measures

PGVFX vs. MSCI World Index

Treynor Measure 7.85  
Beta 0.95  
Alpha 1.34  
Sharpe Ratio 0.45

Data since inception of the Polaris Global Value Fund has been used in calculating the above numbers.

### Calendar Year Performance

As of December 31, (Total Return)

Year	PGVFX	MSCI World
2024	5.34%	18.67%
2023	14.77%	23.79%
2022	-12.01%	-18.14%
2021	15.39%	21.82%
2020	6.65%	15.90%
2019	22.79%	27.67%
2018	-12.66%	-8.71%
2017	20.61%	22.40%
2016	11.67%	7.51%
2015	1.55%	-0.87%
2014	3.68%	4.94%

### PERFORMANCE AS OF MARCH 31, 2025 (Total Return)

Performance data quoted represents past performance and is no guarantee of future results. Current performance may be lower or higher than the performance data quoted. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than original cost. For the most recent month end performance, please call (888) 263-5594. Shares redeemed or exchanged within 180 days of purchase will be charged a 1.00% fee. Fund returns for periods less than 180 days do not reflect this fee; otherwise, if reflected this return would have been lower. Returns greater than one year are annualized.

### HYPOTHETICAL GROWTH OF \$10,000 7/31/89-03/31/25

Growth of a hypothetical \$10,000 investment compared to the MSCI World Index

Past performance is no guarantee of future results. Short-term performance, in particular, is not a good indication of the Fund's future performance, and an investment should not be made based solely on returns. Because of ongoing market volatility, Fund performance may be subject to substantial short-term changes.

### PERFORMANCE COMMENTARY

The Polaris Global Value Fund returned 4.01%, handily outperforming the MSCI World Index, which declined -1.79%. Financials contributed most, followed by Index-beating results in health care, energy and consumer discretionary sectors. Materials and information technology detracted, the latter of which was impacted by industry upheaval over DeepSeek. Fund holdings in Germany, Norway, Sweden, China, Netherlands and Italy returned double-digit gains, while the United States added measurably due to weighting. Canada and Ireland were the only detractors of note, both impacted by underperforming materials companies.

Four of the top 10 overall Fund contributors hailed from the financial sector. DNB Bank's stock price rose more than 30% after announcing stellar quarterly earnings, healthy profit margins and higher return-on-equity targets. Conversely, U.S. financials were reeling over "sticky" inflation, tariffs and slowing GDP growth, which drew recession concerns.

CVS Health Corp. topped the contribution column. The 50%+ surge in stock price was driven by better-than-expected fourth quarter results, Medicare Advantage margin recovery and an upbeat turnaround story under CVS' new CEO. United Therapeutics declined after the company reported lower revenues for its Tyvaso inhaler. In consumer discretionary, Next PLC saw its share price rise due to strong financial performance, an upgraded 2026 profit forecast and online sales growth. China e-commerce site, Vipshop Holdings, had impressive fourth quarter earnings. Elsewhere, Canada's Magna International fell on the threat of 25% tariffs on auto parts. Inchcape lost distribution rights for two Chinese brands, Geely and JAC Autos.

Methanex Corp. dragged down materials sector results. The Canadian methanol producer addressed an unplanned outage in its Geismar 3 plant; downtime will impact second quarter results. Smurfit Westrock's stock price trended down since releasing mixed fourth quarter 2024 results.

We exited seven positions during the quarter: Microsoft Corp., Interpublic Group, Sandoz Group and four community banks. Proceeds from these sales were reinvested into existing holdings, along with the purchase of International Consolidated Airlines Group.

At the end of the day, we expect tariffs and non-tariff trade barriers to be negotiated and renegotiated as bargaining chips in an increasingly interconnected world. We must remember that global trade stands at the forefront of prosperity for all economies – including the U.S.

**THE POLARIS GLOBAL VALUE FUND** is a no-load mutual fund that seeks capital appreciation by investing in value stocks worldwide. The Fund is diversified across country, sector and market capitalization, and typically holds 65 to 100 stocks that meet Polaris’ strict value criteria.

Polaris Capital Management, LLC (the “Adviser”) uses proprietary investment technology combined with Graham & Dodd style fundamental research to identify potential investments. Filters are applied as part of the investment approach, which attempts to identify a list of companies with the most undervalued streams of sustainable free cash flow or assets worldwide. Polaris then conducts rigorous fundamental research on the companies identified in the screening process, subsequently making selections for Fund investment.

THE INVESTMENT ADVISER

Polaris Capital Management, LLC is a global value equity manager that provides investment services for institutional and individual clients. Polaris’ management believes worldwide markets are generally efficient over time, but investor behavior creates volatility that leads to inefficiency somewhere in the world. An integrated global investment strategy may be utilized to help exploit this inefficiency. Polaris believes investing in the most undervalued companies worldwide likely limits risk and has the potential for benchmark-beating returns.

Total return includes reinvestment of dividends and capital gains. During the period some of the Fund’s fees were waived or expenses reimbursed. In the absence of these waivers and reimbursements, performance figures would be lower. **The Fund invests in securities of foreign issuers, including issuers located in countries with emerging capital markets. Investments in such securities entail certain risks not associated with investments in domestic securities, such as volatility of currency exchange rates, and in some cases, political and economic instability and relatively illiquid markets. Options trading involves risk and is not suitable for all investors.** On June 1, 1998, a limited partnership managed by the Adviser reorganized into the Fund. The predecessor limited partnership maintained an investment objective and investment policies that were, in all material respects, equivalent to those of the Fund. The Fund’s performance for periods before June 1, 1998, is that of the limited partnership and includes the expenses of the limited partnership. If the limited partnership’s performance had been readjusted to reflect the first year expenses of the Fund, the Fund’s performance for the periods prior to June 1, 1998, may have been lower. The limited partnership was not registered under the Investment Company Act of 1940 (“1940 Act”) and was not subject to certain investment limitations, diversification requirements, and other restrictions imposed by the 1940 Act and the Internal Revenue Code, which, if applicable, may have adversely affected its performance.

The MSCI World Index, net dividends reinvested measures the performance of a diverse range of global stock markets in the United States, Canada, Europe, Australia, New Zealand and the Far East. The MSCI World Index is unmanaged and does include the reinvestment of dividends, net of withholding taxes. One cannot invest directly in an index or an average.

The Treynor Measure is a risk-adjusted measure of return that divides a portfolio’s return in excess of the riskless return by its beta. Beta is the measure of a fund’s relative volatility as compared to an index. A fund with a beta higher than 1 is expected to be more volatile than the applicable index. Alpha is the difference between a fund’s actual returns and its expected performance given its level of risk as measured by beta. The Sharpe Ratio is a measure of the risk-adjusted return of an investment.

**Before investing you should carefully consider the Fund’s investment objectives, risks, charges and expenses.
